Skills

C++ | Java | JavaScript | NodeJS | MongoDB | Bootstrap | SQL | Git | Github

Projects

Resume Parser and Job Recommendation System

- Built an automated resume parsing system to extract key details using NLP techniques.
- Implemented a job recommendation engine that matches candidates to relevant jobs based on skills and experience.
- Integrated a resume builder feature that auto-generates well-structured resumes based on parsed data.

Blogging Website

- Developed a secure and dynamic blog website with real-time data management.
- Implemented secure login and role-based access control for post management.
- Enabled real-time creation, updating, and deletion of blog posts using MongoDB.
- Easy blog sharing on the platform.

Ecommerce website Frontend

- Developed a responsive and user-friendly e-commerce website frontend.
- Designed a visually appealing and intuitive UI for seamless user experience.
- Interactive shopping cart allowing users to add, update, and remove items with real-time updates.

Academic and Extracurricular Achievements

- **Solved 500+ problems on LeetCode**
- **Solved 120+ problems on GeeksforGeeks**

Positions of Responsibility

SIH | Technical Member   **Sep'23 - Dec'23**

● Our Problem Statement was to optimize the coordination and location of rescue and relief agencies during natural calamities.

● My task was to build the frontend of the website.
